Question: 1 of 45

Time Remaining: 00:05:40

FLAG

The Farallon Islands, or *Devil's Teeth*, as they are referred to by sailors, are a group of small islands with rocky, barren terrain and treacherous underwater currents, 48 km (30 miles) off the coast of San Francisco, California. Although the islands are small, with a combined total land area of 0.41 km² (0.16 square miles), they are positioned in a major ocean current, which enables them to house dense populations of birds, rodents, seals, and other water mammals.

The abundance of wildlife first attracted Russian and American fur traders in the early 1800s, who then nearly eliminated the seal population in the area. The islands then became an agricultural resource for San Francisco during the Gold Rush era when egg companies began harvesting bird eggs on the islands. In 1863, violence between rival egg companies erupted on the islands (known as the "Egg War"), which inadvertently attracted national attention and provoked lawmakers to pass legislation to protect and rehabilitate the islands' natural ecosystem.

In 1881, an executive order was passed that decreed eggng illegal on the Farallons. This ended private enterprises on the islands and was reinforced in 1909 when President Theodore Roosevelt created the Farallon Reservation to restrict human access and preserve the northern islands. Protection was expanded in 1967 to include all the Farallon Islands, and over time many of the islands' original inhabitants have returned.

The Farallons are now home to the world's largest population of western gulls. Seals have returned, as well as otters and sea lions, which in turn attracts great white sharks. The combination of sharks, underwater currents, and jagged coastline are probably what earned the Farallons their nickname "Devil's Teeth," though it hasn't stopped a few adventurous people from swimming. Four people have completed the 30-mile swim from the islands to San Francisco; the fastest person completed the journey in 14 hours.

Stimulus: 1 of 7

Which of the following supports the detail that the Farallon Islands are a natural home to many animals?

- Abundant land
- Human presence
- Lush landscape
- Ocean currents

Question: 8 of 45

Time Remaining: 00:05:04

In 1943, the war in the Pacific raged on. First Lady Eleanor Roosevelt went to rally the troops' spirits, despite the disapproval of military command. Roosevelt planned a grueling itinerary. She visited several islands and hundreds of wounded in her first 6 days. The indefatigable First Lady inspected Navy hospitals, delivered a speech, attended receptions, and visited convalescing officers, all within 12 hours of her arrival. She lifted spirits among the wounded and morale among the troops. She continued her exhausting tour for a month, speaking to every patient in troop hospitals and taking down addresses to contact family members. Roosevelt traveled non-stop, risked her life, and greeted the last patient she saw with the same heartfelt sincerity as the first.

Stimulus: 1 of 2

Which of the following is a reasonable prediction from the passage?

- ☐ Eleanor Roosevelt listened to the wishes of military command, despite their disapproval.
- ☒ Eleanor Roosevelt stopped visiting hospitals and attending receptions after her tour.
- ☐ Eleanor Roosevelt began taking down the addresses of everyone she met after the war.
- ☐ Eleanor Roosevelt was tired both physically and emotionally after her tour.

Hedy Lamarr, the Inventor

Hedy Lamarr was a woman of many talents. She was first known as a European film actress in the 1930s. She began starring in American films with MGM Studios in the late 1930s and early 1940s. Some of her more popular films included *Boom Town* (1940) and *White Cargo* (1942); however, her roles generally did not include very many spoken lines and she became bored. To relieve this boredom, Lamarr took up inventing.

Hedy Lamarr did not have any formal training, but she did not allow that to stop her from teaching herself in her spare time. Although she had a number of failed inventions, such as an improved traffic light and a carbonated drink, Lamarr did not stop coming up with ideas. She even spent time working with the science engineering team employed by Howard Hughes, the aviation tycoon.

During World War II, Lamarr learned that one of the military's new technologies, radio-controlled torpedoes, were too easily jammed and redirected. She came up with a type of radio signal that changed, or "hopped," frequencies and was unable to be tracked or disrupted. With the assistance of her friend George Antheil, she was able to design the system and patent it in August 1942.

Unfortunately, the United States Navy was not interested. The technology of the era wasn't quite good enough to easily implement Lamarr's system, and the Navy was not particularly interested in civilian inventions at the time. It wasn't until 20 years later, during the Cuban Missile Crisis, that a version of Lamarr's system began appearing on Navy ships.

The work Lamarr and Antheil did creating this frequency-hopping system led to many technologies that are often taken for granted today. Their work led to the development of cell phones, Bluetooth, and Wi-Fi. Just think, we might not have any of those things if Hedy Lamarr had been given more interesting roles!

Stimulus: 1 of 5

Which of the following conclusions can be drawn about Hedy Lamarr's acting career?

- ☐ Hedy Lamarr was content with her contribution to film.
- ☐ Hedy Lamarr worked in America films with MGM Studios.
- ☒ Hedy Lamarr wanted more opportunities to speak while acting.
- ☐ Hedy Lamarr was the first European actress of the 1930s.

Peanut Butter Cookies

Grandma Harry 30 minutes Cookies/Desserts Makes 1 dozen

1 egg white
3/4 cup sugar
1 cup peanut butter
1 teaspoon vanilla
1/2 cup flour

Beat egg white until foamy. Stir in sugar, beat again until stiff peaks form. Gently fold in peanut butter and vanilla. Add flour in small increments until dough forms. Chill dough for at least 2 hours. Roll into balls, roll in sugar, press down with a fork, and bake at 350° F for 10 to 12 minutes. Let cool on cookie sheet. These are very fragile.

Stimulus: 2 of 2

Which of the following statements about the passage is true?

- ☐ These cookies should be cooled on a baking rack.
- ☐ Folding in peanut butter must be done with an electric appliance.
- ☐ These cookies can be cooked in a microwave oven.
- ☒ Beating egg whites means stirring them vigorously.

ABC Caregivers is looking for an after-school caregiver to begin working with new clients on Monday, Oct. 2. The family seeks a candidate who is available from 3:00 to 7:00 p.m. Monday through Friday. The family guarantees pay for 20 hours a week, even if the caregiver works less, as well as up to 10 days paid vacation. Care is for a 12-year-old child who is involved in three different sports. A qualified candidate should be comfortable driving to and from practices, help with homework when needed, and hold certification in first aid and CPR.

Minimum requirements for this position also include a valid driver's license and a working cell phone. To be considered for this position, please email info@abccaregivers.com.

Which of the following pieces of information is provided in the classified ad?

- ☒ The days per week a caregiver is needed
- ☐ The anticipated end date of the employment opportunity
- ☐ The number of references the candidate should supply
- ☐ How often the child's practices are held

Bees can develop deformed wings and die after infection from a virus carried by Varroa mites. Researchers engineered gut microbes of bees to produce double-stranded RNA that they hypothesized could reduce the transmission of the virus from the mites to the bees. In a laboratory, healthy bees with engineered gut microbes were exposed to the mites carrying the virus. Compared to bees without the engineered gut microbe, these bees had a 37% higher survival rate 10 days after being exposed.

Which of the following actions would increase the validity of the experiment?

Repeat the experiment, but in an environment more similar to bees' natural environment.

Repeat the experiment, but only expose the bees to microbes and not the virus.

Repeat the experiment, but use microbes that produce double-stranded DNA instead of RNA.

Repeat the experiment, but determine survival rate 5 days after exposure instead of 10.

Blood Alcohol Concentration (percent)

Number of drinks in one hour	Body Weight (kg)					
	45	54	63	72	81	90
1	0.04	0.03	0.03	0.02	0.02	0.02
2	0.08	0.06	0.05	0.05	0.04	0.04
3	0.11	0.09	0.08	0.07	0.06	0.06
4	0.15	0.12	0.11	0.09	0.08	0.08
5	0.19	0.16	0.13	0.12	0.11	0.09

Stimulus: 1 of 1

Which of the following conclusions is supported by the data in the table?

Blood alcohol level is a function of body weight and number of drinks.

People who weigh less than 54 kg should not drink more than four drinks per hour.

Body weight and blood alcohol concentration are unrelated.

Alcohol has little effect on people who weigh more than 80 kg.

Question: 27 of 37

Time Remaining: 00:12:17

The secretary of the library board is preparing a report on a recent meeting at which three major topics were discussed: first, the library's finances; next, its new acquisitions; and finally, its community programs. As the board secretary begins to write the report, they realize that each topic includes at least two subtopics that should be addressed separately.

Using the items below, prepare an outline that could reasonably result from the board secretary's prewriting process. (Move the options into the box on the right, placing them in the selected order. Use all the options.)

Finances

- A. Operating expenses
- B. Capital expenses
- C. Revenue

Acquisitions

- A. Print media
- B. Electronic media

Community programs

- A. Children's outreach
- B. Adult learning and literacy
